Deviation / Incident Report

Report No.	DR-2026-0147
Site	API Manufacturing Unit, Block B
Date of event	18 September 2026, 02:40 hrs
Reported by	Shift In-charge, Production
Product	Paracetamol API
Batch No.	PCM-2609-018
Equipment	Reactor R-204 (SS 316, 6 KL)

Description of event

During the cooling crystallization step of Paracetamol API batch PCM-2609-018, the temperature of Reactor R-204 rose to 52 °C against the validated limit of 40-45 °C and stayed out of range for approximately 25 minutes. The chilled-water supply valve was found partially closed after planned maintenance the previous day. The operator restored cooling and the batch was completed, but it has been placed on QA hold pending impurity and particle size testing. No other batches were in the reactor at the time.

Immediate action

Cooling restored at 03:05 hrs. Batch placed on hold. QA informed.
